

Early Summer Lawncare Care Notes

What we do on this treatment:

Our feed provides early season nutrients for depth of colour, plus the first specialist weed control application.

Early Summer Feed and Weed Control

Our lawn expert says the treatment will:

Feed applied will help maintain a deep green colour and thicken the lawn

The weed control will target emerging weeds.

Treatment Benefits.

Feed

- Greens up quickly without surge growth;
- Long lasting 8-10 week longevity
 - (DIY products 4-6 weeks);
- Gently replaces lost nutrients from cutting.

The weed control:

- will control 80% of weeds on first application;
- is safe for children and pets once dry;
- is the latest technology and safe for the environment

Early Summer lawn cutting advice:

Correct mowing will make the difference between a “so-so” lawn and a great one.

Recommended cut frequency: **Every 5 – 7 days**

Benefits: **encourages a thicker sward and greener colour**

Recommended Cutting Height

Grass Type	Early Spring, Autumn & Winter	Late Spring & Summer
Family / Multi e.g. back lawn	Cut Height 3cm (1.5")	2.5 cm (1")
Luxury e.g. front lawn	Cut Height 2cm (0.75")	1.5 cm (0.5")

Do not mow more than a third off the height of grass in one cut.

Adjust the mowing height for the season.

Summer is the when we use our gardens most. Our Early Summer treatment will help maintain that deep green colour and thick lawn.

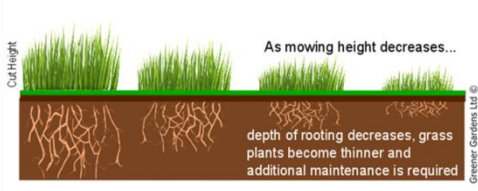

Lawn Edges - Trim edges for a pleasing to the eye look when you cut the lawn.

Weeds – to avoid contamination of home compost dispose of grass clippings in your waste bin for four cuts after treatment.

Golden Rule: Little and often is best

The importance of cutting height:

Cutting Height and Lawn Health

As mowing height decreases...

depth of rooting decreases, grass plants become thinner and additional maintenance is required

Adjust the mowing height for the season.

Do not mow more than a third of the height of grass in one cut.

Other advice ...

Watering: if its dry, start watering to prevent dormancy

Seeding: Now is a great time to over seed your lawn this will enhance the lawn through:

- More desirable species becoming more prevalent
- Introduce more uniformity.
- Improves resistance to drought, wear, disease and moss invasion

Ants: control with **Ant Stop Granule** or **Nemasys No Ants**. Available from our van or on line shop.

Now is a great time to review your lawn for over seeding and planning beneficial treatments
